

Tensile and Creep Property Characterization of Potential Brayton Cycle Impeller and Duct Materials

Filesize: 6 MB

Reviews

This publication is definitely not simple to begin on studying but quite fun to see. It really is full of knowledge and wisdom I am just effortlessly can get a satisfaction of studying a created pdf.
(Alfreda Bradtke)

TENSILE AND CREEP PROPERTY CHARACTERIZATION OF POTENTIAL BRAYTON CYCLE IMPELLER AND DUCT MATERIALS

To save **Tensile and Creep Property Characterization of Potential Brayton Cycle Impeller and Duct Materials** eBook, make sure you access the web link beneath and download the ebook or gain access to additional information that are relevant to TENSILE AND CREEP PROPERTY CHARACTERIZATION OF POTENTIAL BRAYTON CYCLE IMPELLER AND DUCT MATERIALS ebook.

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 34 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This paper represents a status report documenting the work on creep of superalloys performed under Project Prometheus. Cast superalloys have potential applications in space as impellers within closed-loop Brayton cycle nuclear power generation systems. Likewise wrought superalloys are good candidates for ducts and heat exchangers transporting the inert working gas in a Brayton-based power plant. Two cast superalloys, Mar-M247LC and IN792, and a NASA GRC powder metallurgy superalloy, LSHR, are being screened to compare their respective capabilities for impeller applications. Several wrought superalloys including Hastelloy X, (Haynes International, Inc. , Kokomo, IN), Inconel 617, Inconel 740, Nimonic 263, and Incoloy MA956 (Special Metals Corporation, Huntington, WV) are also being screened to compare their capabilities for duct applications. These proposed applications would require sufficient strength and creep resistance for long term service at temperatures up to 1200 K, with service times to 100, 000 h or more. Conventional tensile and creep tests were performed at temperatures up to 1200 K on specimens extracted from the materials. Initial microstructure evaluations were also undertaken. This item ships from La Vergne, TN. Paperback.
